

A — Four-Source Language Code Pipeline

B — Language Set Composition by Source Category

C — Primary Script Distribution

D — FORCE\_LTR Overrides

12 languages; CLDR primary script is historical, not current practice

- Turkish (tr) Latin since 1928
- Indonesian (id) Jawi is secondary
- Uzbek (uz) Latin since 1993
- Kazakh (kk) Latin in transition
- + 8 more: Azerbaijani, Hausa, Kurdish, Kyrgyz, Turkmen, Malay, Somali, Wolof

All assigned ltr despite Arabic being their CLDR primary script

E — Non-Modern Languages (54)

CLDR type 'O' = ancient, extinct, or constructed — not filtered out

- 11 have active Wikimedia projects
- 9 have ISO 639-1 two-letter codes
- Examples: Latin, Gothic, Church Slavic, Sanskrit, Esperanto, Linear A, Old English, Ancient Greek

CLDR modern reflects commercial scope — scholarly scope differs

F — Family Assignment (3-tier)

Full coverage; no language left without a family label

- 246 codes manual mapping (major ISO 639-1 / Wikimedia)
- 610 codes JSON assessment (LLM linguistic inference)
- 1 code ISO 639-5 direct (Min Nan Chinese, code = "nan")

"nan" preserved as string via `pd.read_csv converters kwarg`
